PROFILE

Software Developer specializing in building scalable, high-performance web applications. Experienced in modern JavaScript frameworks, backend development, and cloud services, with a track record of delivering robust, production-ready solutions.

EDUCATION

Dwarkadas J. Sanghvi College of Engineering, University of Mumbai, India

Dec 2020 – June 2024

Bachelor of Technology in Computer Engineering.

CGPA: 9.32/10

Honours: Artificial Intelligence and Machine Learning

WORK EXPERIENCE

Logixal | Associate Software Developer

July 2024 – Present

- Contributed to **15+ enterprise e-commerce implementations**, delivering scalable storefronts and admin tools on VTEX IO, FastStore, and headless architectures.
- Implemented Redis caching for product and session data**, reducing average API response times on high-traffic PDPs and cart endpoints by **60–65%**.
- Configured Varnish reverse proxy for static storefront pages** and optimized **CDN edge caching for assets**, cutting page delivery times by **~70%** on cache hits and reducing image/script load times by **50%**, which collectively improved **Lighthouse performance scores by ~25 points**.
- Delivered production-ready storefront pages (Home, PDP, PLP, Header/Footer) within **aggressive timelines (5 days)** for high-profile clients including **Kohler** and **Ralph Lauren**.

Key Projects:

- Custom Data Synchronization Microservices:**
 - Designed and implemented a configurable, generic backend services (Nest.js) for reliable data synchronization of core entities (products, orders, events, inventory) between various source/destination systems (e.g., files to VTEX).
 - Established a robust, scalable synchronization pipeline leveraging AWS SQS for reliable message queuing and AWS Scheduler for cron-based event triggering.
- Etihad Arena F&B Order App:**
 - Led frontend development (React.js/Next.js) of the customer-facing in-arena ordering app for food, merchandise, and alcohol, displaying real-time event tickets and details.
 - Built and deployed a corresponding VTEX IO Admin App to manage event-specific configurations, including concession/product mapping, setting pre-order times, and triggering event data synchronization via a dedicated AWS Lambda function.
- Docufy.ai (AI-Powered Document Intelligence Platform):**
 - Rapid-prototyped a multi-modal AI engine using React and FastAPI in a high-velocity startup environment, utilizing LLMs to transform unstructured multi-industry data into context-aware, structured insights.
 - Engineered a robust RAG (Retrieval-Augmented Generation) system with a unified ingestion pipeline and generative chat interface, integrating Stripe for B2B/B2C monetization and advanced analytics dashboards to visualize document processing metrics.
 - Architected a secure, multi-tenant platform featuring RBAC for granular permissions and comprehensive audit logs for enterprise compliance, alongside a scalable export ecosystem with 10+ connectors (e.g., HubSpot, ServiceNow, Snowflake).

TECHNICAL SKILLS

- Languages:** JavaScript, TypeScript, Golang, Python, SQL, HTML, CSS
- Frontend:** React.js, Next.js, Tailwind CSS, Zustand, React Redux
- Backend:** Node.js, Express.js, FastAPI, NestJS, GraphQL, REST APIs, Web Sockets
- Databases:** MongoDB, MySQL, PostgreSQL, Redis
- DevOps & Cloud:** Docker, Nginx, AWS EC2, Git, Github, Github Actions
- Testing:** Jest, Cypress
